

Middle School to Dental School™

Please join us for the **Middle School to Dental School™ Mentoring Initiative**. A pathway for oral health progress, this outreach program targeting middle school students is developed by The Children's Oral Health Institute. Currently in the pilot phase, the goal is to help establish relationships that will encourage youth to begin thinking about careers in dentistry and medicine as early as 6th grade. The Program Partnership Template (PPT) will offer exciting resources for the development of relationships between dental schools, and student dentists and middle schools, and children in grades 5th, 6th, 7th, and 8th.

Earn continuing education credit hours while learning meaningful ways to encourage children and youth to consider the many career opportunities within the profession of dental medicine. Your time commitment to this initiative to endear our youth may contribute to the expansion of dental professionals in communities where the need is greatest.
