Ms. Lee A. Wellman, Chief Executive Officer, Any Dental Detail

• Board Members, The Children's Oral Health Institute
On October 1, 2008, the Maryland Department of Education convened a meeting to discuss the inclusion of oral health education in the state curriculum at the request of The Maryland Children's Oral Health Institute. Representatives from The Maryland Children's Oral Health Institute, the Maryland Dental Society, the Maryland State Dental Association, the National Dental Association and KEH Communications participated in the conversation. The 2000 Surgeon General's Report was referenced to help demonstrate the correlation between painful tooth decay, classroom performance and missed school days. At the conclusion of a most healthy discussion, it was clear that educators recognized the importance of teaching children about preserving their dentition and preventing oral diseases. The educators and dentists agreed that death should never be a consequence of untreated tooth decay because of a lack of knowledge about how to prevent the disease.

To help ensure all educators deeply appreciate the essential need to establish oral health education in the primary school curriculum, The Maryland Children's Oral Health Institute subsequently produced “Code Red: The Oral Health Crisis In Your Classroom—Empowering the Teacher to Teach Oral Health Education - A Curriculum Resource Reference.” This resource reference, compiled to better prepare the teacher to teach oral health education, contains a collection of age-appropriate, guideline-sensitive lessons for kindergarten through grade twelve. Many of the lessons incorporate teaching mathematics, reading, science, history, health and nutrition in conjunction with proper dental hygiene and disease prevention.
Dentists want to do all that they can to help children and families learn how to have good dental health and prevent diseases of the mouth and throat. Code Red: The Oral Health Crisis In Your Classroom© will be an invaluable resource reference to help facilitate the teacher’s identification of relevant links, downloadable activity sheets, read aloud books, scientific experiments and more. Educators will learn how to register to receive free posters, toothbrushes, toothpaste and a variety of many other useful items. Contact information for the local and national dental organizations is also made available in this booklet. Please do not hesitate to utilize these dental professionals and organizations to support your oral health lesson plans, coordinate field trips to local dental schools and to the National Museum of Dentistry or to arrange for presentations to your students.

The profession of dental medicine greatly appreciates the sensitivity of all our local and national educational administrators, classroom teachers, school nurses and parents for their understanding of the need to make oral health awareness and instruction a standard part of learning for children and youth everywhere.

Sincerely,

Winifred J. Booker, DDS
CEO & Director of Development

“You’re not healthy without good oral health.”
- Former U.S. Surgeon General Dr. C. Everett Koop
Dear Educator

The Children’s Oral Health Institute has coordinated this oral health literacy movement to sensitize teachers to the impact that poor dental health can have on classroom performance. This handbook contains many valuable curriculum resources that can help to elevate the wellbeing of entire families. The commitment of teachers to incorporate oral health education into their lesson plans is of fundamental importance to the concerted efforts to reduce and eventually end the oral health crisis in classrooms and throughout society.

Code Red: The Oral Health Crisis In Your Classroom® aims to achieve the following objectives by empowering elementary, middle and high school educators to:

• Appreciate the essential need to establish oral health education as part of the elementary, middle and high school curriculum.
• Integrate teaching oral health lessons with teaching mathematics, reading, music, science, history and comprehensive health education.
• Access materials and provide literature about proper dental hygiene and oral disease prevention.
• Have an increased awareness of the devastating effects that tooth decay has on a student’s ability to learn.
• Identify physical, emotional and behavioral signs and symptoms of dental disease when a child is in the classroom.

Code Red: The Oral Health Crisis In Your Classroom® Empowering the Teacher to Teach Oral Health Education – A Curriculum Resource Reference has been compiled to enlist the assistance and support of teachers. This resource reference is designed to heighten the awareness of the classroom instructor about the devastating impact tooth decay can have on a student’s ability to learn. It is an appeal to teachers to help educate their students about the importance of having good oral health.

Day after day, in classrooms all across this country, far too many children endure pain caused by tooth decay. A toothache causes unimaginable suffering. As an adult, if you have ever had a toothache, you can appreciate how a child must feel sitting in your classroom for an entire day with many teeth that are filled with disease and hurting. It is difficult, if not impossible, to perform the most basic functions of daily life while experiencing the excruciating pain from a toothache.
Untreated tooth decay can lead to behavior problems at home and in the classroom. Low student achievement and poor social skills, the possibility of dropping out of high school, drinking, smoking, stealing, drug usage and future challenges securing meaningful employment can translate into some of the awful consequences that can be caused by dental disease neglect.

All health care and education professionals must unify and work together to eradicate the oral health care disparities that plague our children in classrooms and communities. It is up to all of us to help do away with the painful cycle of oral health neglect that has caused death and continues to afflict and disable too many children.

For Want of a Dentist
Prince George's County Boy Dies After Bacteria From Tooth Spread to Brain

By Mary Otto
Washington Post Staff Writer
Wednesday, February 28, 2007; B01

“Twelve-year-old Deamonte Driver died of a toothache Sunday. A routine, $80 tooth extraction might have saved him....
‘Make sure you pray before you go to sleep,’ he told her...
‘When I got there, my baby was gone,’ recounted his mother.”
Health Care Officials Elaborate on Septic Shock, Ailment that Killed Local 6-Year-Old

By Toni Miles
WLOX TV - ABC 13
Biloxi Gulfport Pascagoula; Southern Mississippi
March 4, 2007

“Septic shock is, basically, in layman’s terms, an infection that spreads into the blood system, and when that infection is in the blood system, it starts shutting down some of the main organs in the body,” said Dr. Lindberg Clark. 6-Year-Old Alexander Callender died.
Oral Health Neglect: A Cycle of Pain

Oral Health Neglect can lead to Behavior Problems which could result in Low Student Achievement.

- Increases probability of Drinking
- Might end up Smiling
- Unsafe Sex
- Stealing
- Drugs
- Pregnancy
- Diseases

Identifying Oral Health Neglect in Your Classroom

**Signs**
- frequently absent
- does not sing
- seldom laughs
- frowned face
- unbalanced gait
- refuses to eat
- rocks back & forth
- tearful wailing
- moans & groans
- withdrawn
- paces the floor
- hand over the mouth
- head on the desk
- angry outbursts
- often irritable
- hands over eyes
- low test scores
- inability to concentrate
- low self esteem

**Symptoms**
- elevated temperature
- foul smelling breath
- drooling
- clenched teeth
- chapped lips
- teeth with brown stains
- teeth with black holes
- mouth sores
- swollen lip
- swollen eye
- swollen cheek
- swollen neck
- dehydrated
- frequent earaches
- frequent headaches
- impaired speech
- hyperactive

Grade K - Proper Brushing & Healthy Snack Choices
Grade 1 - Proper Brushing & Healthy Snack Choices
Grade 2 - Proper Brushing & Healthy Diet Choices

Teacher’s Guide: Mouth and Teeth (Pre-K to Grade 2)
Teeth are those enamel-coated wonders that help us chew, talk and smile! Unfortunately, many of your students might not know how to care for their pearly whites properly. The following discussion questions and activities will help your students learn more about their teeth and the mouth as well as gain insight into the importance of dental health.

Pre-K to Grade 2: Personal Health Series

Crest 1st Grade Dental Health Program

Pre-K to Grade 2: Personal Health Series
Grade 3 - Proper Brushing, Flossing, Tooth Decay & Healthy Diet Choices
Grade 4 - Proper Brushing, Flossing, Fluoride Rinses
Grade 5 - Proper Brushing, Flossing, Rinsing & Tobacco Education

Teacher’s Guide: Smoking (Grades 3 to 5)
Smoking can really wreak havoc on your health, not to mention your personal hygiene (think bad breath, yellow teeth and stinky clothes)! It’s never too early to inform your students about the dangers of smoking. The following discussion questions and activities will help students to see through the smoke and find out the truth about cigarettes.

Quiz: Smoking (Grades 3 to 5)
Instructions: Answer each question.

Handout: Smoking Adds Up (Grades 3 to 5)
Instructions: If each pack of cigarettes costs $4, calculate how much a smoker would spend in a year if he/she smoked the amounts listed below.

American Dental Association Web Page
http://www.ada.org/353.aspx
The American Dental Association offers an Animations & Games section for families and kids. The site also provides a section for teachers that includes Classroom Ideas and Resources.

ADHA Kid’s Stuff
http://www.adha.org/kidstuff/index.html
The American Dental Hygienists’ Association hosts this fact-filled site on dental health for elementary kids. The Common Questions section offers dental FAQs and an e-mail opportunity if your question isn’t answered on the site. Interactive games include Visiting the Dental Hygienist and After School Treats that promote healthy choices for good oral health. The Very Cool Links are not specific to dental health but are still kid safe and fun to pursue.
Healthy Teeth
http://www.healthyteeth.org
Subtitled the “Oral Health Education Database,” this site offers information for upper elementary students on Teeth & Gums, Cavities, Prevention, Braces and more. The section on “Experiments and Activities” provides some interesting experiments for kids in grades four to six.

Kid’s World
Colgate-Palmolive sponsors this home for Dr. Rabbit’s No Cavities Clubhouse. Here, children can tour the world and learn about dental health through games and activities designed for the primary elementary set. The site provides a printable tooth brushing chart, fun facts on oral hygiene, a chance to find a secret message from the tooth fairy and activities that promote healthful snacking.

Crest Kids
http://www.crest.com/crest-kids/
Crest presents this website on dental health. The site offers ideas and tips for parents and teachers to use as they teach students about the value of good dental health. Included: An “eggsperiment” for teaching kids about cavities.
The Magic School Bus Maze Craze
http://www.scholastic.ca/magicschoolbus/games/colgate/colgate2.htm
This game challenges students to make their way around a maze while making healthful choices for snacks and meals to promote good dental health. Three visits to the Brushing Station will help keep players’ teeth healthy so kids can rack up more points each game. The site also has a link to more information about teeth and dental health.

Tell the Tooth Glyph
The Baltimore County Public Schools published this online lesson plan that challenges students to gather tooth information, create a visual display of what they’ve learned and create a tooth creature as a result. Perfect for elementary students, the lesson comes with a printable activity sheet and a tooth graphic children can use for their project.

**Brush Your Teeth**
(Sung to: “Row, Row, Row Your Boat”)
Brush, brush, brush your teeth,
At least two times a day.
Cleaning, cleaning, cleaning, cleaning,
Fighting tooth decay.
Floss, floss, floss your teeth,
Every single day.
Gently, gently, gently, gently,
Whisking plaque away.
Rinse, rinse, rinse your teeth,
Every single day.
Swishing, swishing, swishing, swishing,
Fighting tooth decay.

**Dental Health Songbook Can Teach**
**Dental Health Songs, Poems, and Fingerplays**

**Are Your Teeth Clean and White?**
(Sung to: “Do Your Ears Hang Low!”)
Do you brush them every night?
Do you brush them in the morning?
Do you brush them right?
Do you brush them side to side?
Are your teeth clean and white?
Do you floss them good
To remove the bits of food?
Do you floss them every day?
Like you know you should?
Do you take good care of
The teeth that are there?
Do you floss them good?
I Have a Loose Tooth
I have a loose tooth,
A wiggly jiggly loose tooth,
I have a loose tooth,
A-hanging by a thread.
So I pulled my loose tooth,
My wiggly jiggly loose tooth,
Put it 'neath my pillow,
And then I went to bed.
The fairy took my loose tooth,
My wiggly jiggly loose tooth,
And now I have a nickel,
And a hole inside my head.

Brushing Song
(Sung to Old MacDonald Had a Farm)
In my mouth I have some teeth,
E-I-E-I-O
And in my mouth I put my brush,
E-I-E-I-O
With a brush, brush here
And a brush, brush there
Here a brush
There a brush
Everywhere a brush, brush
In my mouth I'll keep my teeth!
E-I-E-I-O!!!!

My Tooth
My tooth fell out and left a space
So big my tongue can touch my face.
And every time I smile I show
The place where something used to grow.
I miss my tooth as you can guess
But now I have to brush one less!

Give me the strength and courage to teach;
To conquer this goal that I must reach;
To guide those little faces dear;
To help them learn to see and hear.

And even when my patience wear
To them I must always be dear
And guide those little wondering feet.
To conquer things that they must meet.

Then, when my daily task is done,
And I can truthfully say I’ve won,
To you dear one, I’ll turn my face
And say a little prayer with grace
To thank you for your kindly deed.
You always help when one’s in need.

by

Martha Thomas Jones

December 10, 1942
The Children’s Oral Health Institute would like to thank all of our educators for utilizing the *Code Red: The Oral Health Crisis In Your Classroom* resource reference. We believe that you will find the educational material and instructional information contained within this booklet quite useful. Your commitment as a teacher to teach oral health education in the classroom will help to relieve needless suffering and improve the lives of children and families.

We as well thank all of the volunteers who took part in the groundbreaking meeting with the Maryland Board of Education in 2008 to appeal for the inclusion of oral health education for grades K through 12.

Sincerely,

The Children’s Oral Health Institute
The Children’s Oral Health Institute (MCOHI) is a 501(c)3 organization created to combat dental neglect and oral abuse among children. Our goal is to improve the attitudes and behavior of children and families on a variety of oral health issues through early health promotion and disease prevention education.

Our Purpose Is To...
- Provide various, independent studies regarding dental treatment for children
- Improve preventive dental education outreach and public awareness
- Conduct research projects and clinical studies in pediatric dentistry
- Serve as a national children's oral health information center
- Encourage, support and evaluate innovative ideas, products and programs in oral health services delivery to children.

Learn More About COHI
www.mycohi.org • info@mycohi.org
"Code Red: The Oral Crisis in Your Classroom® is a tremendous resource in the classroom. The methodology, designed to help educators recognize the signs and symptoms of a child suffering from tooth decay in addition to providing them with the tools to teach children the importance of oral health, is fundamental."
~ Wayne J. Riley, MD, MBA, MPH, MACP - President & Chief Executive Officer, Meharry Medical College

"I encourage teachers to use Code Red in their classrooms to help prevent needless pain, suffering and even death at the hands of oral disease."
~ Congressman Elijah E. Cummings, 7th District of Maryland

"Code Red: The Oral Health Crisis in Your Classroom® is exceptionally innovative. It inspires vulnerable children to be committed to and passionate about oral health……”
~ Christian S. Stohler, DMD, DrMedDent - Dean, University of Maryland, Baltimore College of Dental Surgery

"School nurses across the country see children suffering from tooth decay and pain on a daily basis. Tooth decay causes needless pain and missed school days. Code Red: The Crisis in Your Classroom® is a user-friendly resource that can help teachers educate students about the importance of oral health and prevention of dental caries and disease."
~ Sandi Delack, RN, M Ed, NCSN - President, National Association of School Nurses

"Tooth decay is real and prevalent in the classroom. When a teacher fails to recognize the student's pain, additional challenges arise for both the teacher and student. Code Red is an invaluable resource that equips teachers with the knowledge to effectively respond to this oral health crisis."
~ Shannon M. Paige - Third Grade Teacher, Centennial Place Elementary School
“Tooth decay is the most common chronic childhood disease in America, affecting 50 percent of first graders and 80 percent of 17-year-olds. Twenty million children - 25% of persons under age 19 - suffer 80% of all tooth decay. It is five times more frequent than asthma. Untreated tooth decay and disease can affect a child’s health, well-being, growth, and achievement. Children with serious oral health problems can have difficulty eating and sleeping, or concentrating in school. For an estimated 4-5 million of these children, tooth decay interferes with routine activities. Over 51 million school hours are lost each year due to dental-related problems.”

In the future, all states may institute the inclusion of oral health questions on their Standardized Tests. Educating children early about their dentition and their oral health could help to reduce health care costs, improve graduation rates and save lives. We appreciate the consideration of education officials throughout the nation to consider this type of basic dental health questions for inclusion on their State Standardized Tests.

1) Where is dental plaque found?
